

UNDERGROUND ELECTRIC SERVICE PROJECT PLAN 2010 - 2014

In 2010 electric lines serving the streets shown in green are being moved from overhead to underground, and underground service lines are being installed to homes and businesses in the area. During 2011-2012, underground conduit will be installed in utility easements in the areas shown in red. New underground distribution lines will be installed in the conduit, and service pedestals and transformers will be put in place. During 2013 and 2014, homes and businesses in these areas will be connected to the new underground system and overhead lines will be removed. Where needed, new underground service lines will be installed to customers' property. For more details, please see our project FAQ or call CFU at 319-268-5297.
