

Join us for the 2022 Lunch & Energy Experts Event

Get expert advice on how to implement efficiency projects and achieve energy goals.

Join us on Friday, January 21 for lunch and presentations sponsored by CFU Energy Services. You'll get the chance to hear from industry leading experts at no cost to you.

John Waldon from Shive-Hattery will discuss electric vehicle requirements for businesses. Fast-track your infrastructure R&D process and avoid costly missteps with best practices for preparing your facility for electric vehicles.

Then, Julie Blackwell from Michaels Energy will present on cost-effective methods for achieving sustainability and environmental goals. Learn how to systematically identify, get approval, and complete projects that take you on a path to achieving your goals.

Matt Hein, CFU Energy Services Manager will also provide an update on new incentive programs available at CFU.

Attend the 2022 Lunch & Energy Experts event.

Please RSVP to Matt Hein at matt.hein@cfunet.net or 319-268-5427 by Friday, January 14.

You are encouraged to submit topics for discussion or questions.

Featured Speakers

JULIE BLACKWELL

Michaels Energy

Associate Director of Programs

Julie Blackwell, Associate Director of Programs at Michaels Energy has 17 years of experience in the Energy Efficiency Industry. She spent over nine years managing energy efficiency programs at a utility followed by nearly eight years consulting with utilities and facility managers helping them meet their objectives. Her passion is helping people succeed. She has leveraged this passion by focusing on training, education and helping others create strategic roadmaps to their goals. Julie has experience working with numerous businesses to help them establish their energy management and sustainability goals and plans.

JOHN WALDON

Shive-Hattery

Sr. Electrical Engineer, PE

Beyond providing over 30 years of technical knowledge, engineering support, and solid design, John's motivation lies within developing genuine relationships with clients. As a licensed electrical engineer at Shive-Hattery's Des Moines office, John helps clients with a wide range of projects including electrical power distribution design; onsite generation; lighting, fire alarm, security, and electronic technology systems; and arc flash analysis studies. Most recently, John's passion for sustainable design has heavily emerged him into utility scale solar power systems and Electric Vehicle Charging Stations (EVSE) for utility fleet vehicles.

ASK CFU:

Does my business qualify for rebates on custom efficiency projects?

CFU has a custom rebate program designed to support businesses' investments into energy efficiency. This program accommodates projects that are outside of standard CFU rebates. Systems that may have projects that qualify for custom rebates include: compressed air, HVAC, advanced lighting, refrigeration and specialized process equipment. Projects must be screened through a pre-approval process to determine if they are eligible for a rebate. Contact Matt Hein at 319-268-5427 or Matt.Hein@cfunet.net to see if your project is eligible.
